SISTEM INFORMASI AKUNTANSI MANAJEMEN PADA FANANO GYM,
dibawah bimbingan Arochman, M.Kom dan Nur Fadhilah, M.Hum

208 + xix halaman / 214 gambar / 29 tabel

ABSTRAK

Fanano Gym merupakan sebuah usaha di bidang fitness yang menyediakan layanan latihan harian, membership bulanan, serta penjualan produk seperti suplemen dan minuman. Kegiatan transaksi pada Fanano Gym sebelumnya dilakukan secara manual, mulai dari pencatatan member, pembayaran latihan harian, hingga penjualan produk, yang berpotensi menyebabkan terjadinya kesalahan pencatatan, duplikasi data, dan kurangnya efisiensi dalam proses pelaporan. Berdasarkan permasalahan tersebut, dibangunlah sebuah Sistem Informasi Manajemen Akuntansi Pada Fanano Gym berbasis web yang dapat membantu proses pencatatan, penghitungan, dan pelaporan secara terintegrasi. Metode pengumpulan data dilakukan melalui data primer dan sekunder, sedangkan metode pengembangan sistem menggunakan model waterfall yang terdiri dari lima tahapan, yaitu: communication, planning, modelling, construction, dan deployment. Pengujian sistem ini menggunakan metode pengujian Graphical User Interface (GUI) serta User Acceptance Test (UAT). Sistem ini mencakup fitur-fitur utama seperti manajemen member, transaksi membership, latihan harian, penjualan produk, pencatatan pengeluaran, serta laporan umum akuntansi. Dengan adanya sistem ini, proses operasional di Fanano Gym dapat dilakukan secara lebih efektif, efisien, dan terorganisir.

A MANAGEMENT ACCOUNTING INFORMATION SYSTEM FOR FANANO GYM, under the guidance of Arochman, M.Kom and Nur Fadhilah, M.Hum

208 + xix pages / 214 images/ 29 table

ABSTRACT

Fanano Gym is a fitness business that provides daily training services, monthly membership, and sales of products such as supplements and drinks. Transaction activities at Fanano Gym were previously carried out manually, starting from member registration, daily training payments, to product sales, which have the potential to cause recording errors, data duplication, and lack of efficiency in the reporting process. Based on these problems, a web-based Accounting Management Information System was built at Fanano Gym that can help the recording, calculation, and reporting process in an integrated manner. The data collection method is carried out through primary and secondary data, while the system development method uses a waterfall model consisting of five stages, namely: communication, planning, modeling, construction, and deployment. Testing of this system uses the Graphical User Interface (GUI) testing method and User Acceptance Test (UAT). This system includes key features such as member management, membership transactions, daily training, product sales, recording expenses, and general accounting reports. With this system, operational processes at Fanano Gym can be carried out more effectively, efficiently, and in an organized manner.
