ABSTRAK

Toko Qonita Jaya merupakan toko yang bergerak di bidang penjualan perlengkapan plastik dan bahan-bahan kue. Kegiatan operasional yang dilakukan Toko Qonita Jaya sebelumnya dilakukan secara manual, proses pencatatan transaksi penjualan yang masih dilakukan menggunakan buku catatan dan kalkulator, sehingga menimbulkan risiko kesalahan pencatatan, data transaksi yang rentan terlewat, dan keterlambatan dalam penyajian laporan keuangan. Berdasarkan permasalahan tersebut dibangunlah sebuah Sistem Informasi Akuntansi Penjualan Pada Toko Qonita Jaya berbasis web yang dapat membantu proses pencatatan, perhitungan dan penyusunan laporan keuangan. Metode pengumpulan data yang digunakan meliputi wawancara, observasi, dan dokumentasi, sedangkan metode pengembangan sistem menggunakan metode waterfall yang terdiri dari tahap communication, planning, modelling, construction, dan deployment. Pengujian sistem ini menggunakan metode pengujian Graphical User Interface (GUI) dan User Acceptance Test (UAT). Hasil yang diperoleh adalah sistem informasi akuntansi penjualan yang memiliki fitur-fitur utama seperti master data, transaksi, histori transaksi, pencatatan akuntansi, dan laporan keuangan. Sistem yang dibangun mampu menggantikan proses pencatatan manual sehingga seluruh proses pencatatan dan pelaporan keuangan Toko Qonita Jaya dapat dilakukan secara lebih cepat, akurat, dan terstruktur guna mendukung pengambilan keputusan bisnis yang lebih efektif bagi pemilik toko.

ABSTRACT

Toko Qonita Jaya is a store engaged in the sale of plastic supplies and baking ingredients. The operational activities of Toko Qonita Jaya were previously carried out manually, where the process of recording sales transactions was still performed using notebooks and calculators, resulting in risks of recording errors, transaction data that were prone to being missed, and delays in the presentation of financial reports. Based on these problems, a web-based Sales Accounting Information System for Toko Qonita Jaya was developed to assist the process of recording, calculating, and preparing financial reports. The data collection methods used include interviews, observation, and documentation, while the system development method uses the waterfall method consisting of the communication, planning, modelling, construction, and deployment stages. System testing was carried out using the Graphical User Interface (GUI) testing method and User Acceptance Test (UAT). The results obtained are a sales accounting information system that has main features such as master data, transactions, transaction history, accounting records, and financial reports. The system that was built is able to replace the manual recording process so that the entire process of recording and reporting the finances of Toko Qonita Jaya can be carried out more quickly, accurately, and in a structured manner in order to support more effective business decision-making for the store owner.
